

ALEX A

Bachelor of Computer Science and Engineering

+91 7845206876 — alex.data.dev44@gmail.com — LinkedIn — GitHub

EDUCATION

Dr. N.G.P. Institute of Technology, Coimbatore

Bachelor of Computer Science and Engineering

Aug 2023 – May 2027

CGPA: 8.17

EXPERIENCE

Machine Learning Intern

Right Angle Solutions, Koduvai, Tiruppur

June 2025

- Built a heart disease prediction system using Logistic Regression, improving accuracy from 86% to 93%.
- Performed Exploratory Data Analysis (EDA) and optimized feature selection.
- Developed and deployed a Flask-based web interface for real-time risk prediction.

PROJECTS

EduQuity  GitHub (Winner – Best Social Impact Project) *Next.js, React, TypeScript, Node.js, Tailwind CSS, Gemini AI*

- Built a full-stack educational platform with role-based dashboards supporting students, teachers, and administrators across multiple academic workflows.
- Integrated a Gemini AI-powered tutoring assistant providing real-time learning support and contextual doubt resolution.
- Developed scalable REST APIs for internships, scholarships, analytics, and task management, reducing administrative effort by approximately 40%.

OncoDetect AI  GitHub (APK Deployed) *Dart, Android Studio, Machine Learning*

- Developed an Android application for early cancer risk prediction using machine learning techniques and healthcare datasets.
- Built an intuitive mobile interface in Dart using Android Studio, enabling users to input health parameters and receive predictive insights.
- Integrated a trained prediction model with the mobile application to deliver real-time risk assessment.
- Generated and deployed a functional APK for end-user testing and demonstration.

MailGuard AI  GitHub (National Level Hackathon Finalist) *Python, NLP, Scikit-learn, Flask, Machine Learning*

- Developed an AI-powered email spam detection system capable of classifying phishing, spam, and legitimate emails using Natural Language Processing techniques.
- Built a machine learning pipeline involving text preprocessing, TF-IDF vectorization, feature extraction, and classification to improve detection accuracy. a Flask-based web interface that enables real-time email analysis and risk prediction with an intuitive user experience.
- Implemented explainable predictions and keyword-based threat indicators, helping users identify suspicious email content effectively.

TECHNICAL SKILLS

Languages:	Java, Python, SQL
AI & Machine Learning:	Scikit-learn, Pandas, OpenCV, NLP, RAG, Prompt Engineering, Model Evaluation, EDA, Gemini API
Frameworks:	React.js, Next.js, Node.js, Flask, FastAPI
Web Technologies:	HTML, CSS, JavaScript, TypeScript, Tailwind CSS
Tools:	Git, Docker, VS Code, Cursor, Ollama, n8n

CERTIFICATIONS

- Introduction to Internet of Things (NPTEL) – Elite + Silver
- Cloud Computing (NPTEL)

ACHIEVEMENTS

- Winner – Hackathon, United Institute of Technology.
- Winner – Prompt Scapes, KPR Institute of Technology.
- Runner-Up – Project Presentation, KPR Institute of Technology.
- Top 10 Finalist (2x) among 250+ teams in National-Level Hackathons.

LEADERSHIP & INDUSTRY ENGAGEMENT

- Head (Chairman), Hackathon Club – Organized technical hackathons and industry events.
- Project Lead – Led EduQuity, AI Resume Enhancer, and HeartSense from design through deployment.
- Campus Collaboration – Ottonomy IO (Robotics MNC), collaborated on user research and market surveys to support autonomous robotics initiatives and product development.
