

ALEX A

AI/ML Engineer — LLM, RAG and ML Systems in Python
+91 7845206876 — alex.data.dev44@gmail.com — LinkedIn — GitHub

Education

Dr. N.G.P. Institute of Technology, Coimbatore
Bachelor of Computer Science and Engineering

Aug 2023 – May 2027
CGPA: 8.22

Experience

Artificial Intelligence Intern

Jul 2026 – Present

Sennovate, Coimbatore

- Built Ansible Failure Whisperer, an LLM-based diagnostics tool that analyzes Ansible/AWX automation failures and generates plain-English explanations of failure causes using local LLM(Qwen 3.5B) inference.
- Designed and built an enterprise User Access Review (UAR) governance platform that consolidates application, identity, account and entitlement data into a unified inventory.
- Implemented data ingestion, schema validation, reconciliation, KPI analytics and access-review workflows to automate enterprise identity-governance processes.
- Researched and evaluated LLMs, Retrieval-Augmented Generation (RAG) and prompt engineering approaches for cybersecurity, SOC/NOC and enterprise automation use cases.

Machine Learning Intern

June 2025

Right Angle Solutions, Koduvai, Tiruppur

- Built a heart disease prediction model using Logistic Regression, improving accuracy from 86% to 93% through exploratory data analysis (EDA) and feature-selection optimization.
- Developed and deployed a Flask web interface for real-time risk prediction.

Projects

Decisio GitHub (Top 10 Finalist among 1,500+ Participants)

Python, LLMs, RAG, Flask, FastAPI

- Built an enterprise decision-intelligence platform that uses LLMs and RAG to turn business data into strategic recommendations.
- Engineered workflows for business diagnosis, competitor analysis and contextual decision support using document retrieval, prompt engineering and modular AI pipelines.
- Developed a Flask application with interactive dashboards for analyzing enterprise data and identifying operational bottlenecks.

MailGuard AI GitHub (National Level Hackathon Finalist)

Python, NLP, Scikit-learn, Flask, Machine Learning

- Developed an NLP-based classifier that separates phishing, spam and legitimate emails.
- Built the ML pipeline covering text preprocessing, TF-IDF vectorization, feature extraction and classification.
- Built a Flask web interface for real-time email analysis and risk prediction.

EduQuity GitHub (Winner – Best Social Impact Project)

Next.js, React, TypeScript, Node.js, Gemini API

- Built a full-stack educational platform with role-based dashboards for students, teachers and administrators.
- Integrated a Gemini API-powered tutoring assistant for real-time learning support and contextual doubt resolution.

Technical Skills

Languages:	Python, SQL, Java
LLM & GenAI:	Generative AI, LLMs, RAG, Prompt Engineering, LangChain, LangGraph, LlamaIndex, Transformers, Gemini API, Ollama
Machine Learning:	NLP, Scikit-learn, Pandas, EDA, Model Evaluation
Vector Database:	FAISS, Chroma
Backend & APIs:	FastAPI, Flask, REST APIs
Tools:	Git, Docker, n8n, Claude Code, Cursor, VS Code

Achievements

- Winner – Hackathon, United Institute of Technology.
- Winner – Prompt Scapes, KPR Institute of Technology.
- Runner-Up – Project Presentation, KPR Institute of Technology.
- Top 10 Finalist (2x) among 250+ teams in National-Level Hackathons.

Leadership

- **Head (Chairman), Hackathon Club** – Organized technical hackathons and industry events.
- **Project Lead** – Led EduQuity, AI Resume Enhancer and HeartSense from design through deployment.
- **Campus Collaboration – Ottonomy IO (Robotics MNC)** – Collaborated on user research and market surveys to support autonomous robotics initiatives and product development.
